# How to seek help

Our mental health changes over time in response to different life experiences. We can all move up and down the mental health continuum. Managing your own mental health is important at all stages of the continuum. We can maintain good mental health even while living with a mental illness, or conversely, experience poor mental health in the absence of mental illness. It is possible to be diagnosed with a mental disorder and still engage in football and experience positive states of wellbeing.

### When should you reach out for help?

The earlier the better. When you are reacting or injured, start the process and know your options. If you are experiencing mental ill-health, reach out for professional help.

### **Mental fitness** Healthy Injured III-Health » Energised, ready for challenges » Socially engaged with work, Irritable, nervous, sad Feeling moody, irritable or teary » Social isolation friends, footy and family and reactive » Resilient to large stressors Lacking energy and motivation » Excessive anxiety, depression » Recovering quickly from Feelings of stress or anxiety » Emotionally aware and thriving Tired, having trouble sleeping » Can't fulfill obligations setbacks Trouble sleeping Having trouble concentrating » High motivation » Unable to fall/stay asleep » Self-aware and managing Low motivation and making decisions » Leading others to achieve » Feeling worthless or hopeless emotions appropriately and flourish Procrastination » Feeling overwhelmed » Motivated and flexible » Thoughts of self-harm and indecisiveness by emotions » Superior focus, problem solving or harming others » Good decision making and decision making Withdrawing from social » Missing training, or regularly and problem solving » Using alcohol to cope networks running late » Strong impulse control » Normal sleep patterns » Withdrawn from friends, family » Low resilience to daily stressors » Excellent sleep patterns

# Identify signs early -

Are you experiencing symptoms in the orange and red end of the continuum? Have they been occurring for two weeks or more?

Early identification is important! It leads to early intervention. You may reduce the time and severity of your health condition.

# 2 Who is your helper?

Is there someone you trust who you can reach out to? Can they assist you in discovering your professional help networks?

Ask a friend, family member or someone you trust to help you book the appointment.

### Helpers might be:

Family members or partners
Teammates
Coach
Team volunteer

# You have options

Explore your options – there are different levels of support, depending on your experience and situation.

This could be online or telehealth, or face to face using professional health sources.

Everyone's circumstances and mental health are unique. There is no one size fits all for building mental fitness or managing mental ill-health

# Connect and commit

Know that seeking help through qualified professionals ensures your privacy and confidentiality by law.

Persevere. Changing mental habits is like building physical fitness skills and requires practice and commitment.

Challenge the belief that 'I should be able to fix things myself'.

# **In-Person Support**

### **General Practitioner:** Mental Health Care Plan

A support plan for someone who is experiencing mental health issues, referred by a GP/Doctor to an expert, such as a psychologist or mental health consultant. Individual has access to Medicare rebates for up to 10 individual and 10 group appointments with allied mental health services in a year.

### **Private Psychologist**

You can attend a consultation without a referral, but if you visit a GP, you may be assessed for a Mental Health Plan. To access this service, make an appointment with a psychologist or with your GP/Doctor.
